PROFESSIONAL SUMMARY

AI Engineer with hands-on experience building LLM-powered applications, NLP pipelines, and retrieval-augmented systems end-to-end — from model fine-tuning to production API integration. Skilled in Python, PyTorch, and Transformers, with a track record of shipping AI products that rank, extract, and generate structured information, including a Top 5 placement at SOFTEC'26 AI Hackathon. Complemented by backend engineering experience building and maintaining REST APIs for production systems.

EDUCATION

BS Computer Science ***2023 – 2027***
FAST NUCES (National University of Computer & Emerging Sciences), Lahore

WORK EXPERIENCE

Full-Stack Development Intern ***August 2026 – September 2026***
Ignicube Pvt Limited

- Developed and integrated full-stack features using React, Next.js, FastAPI, MongoDB, Clerk Authentication, and WebSockets.
- Solved real-world development and deployment issues while working with Docker and CI/CD pipelines, improving reliability across development and production environments.

Software Engineering Intern – IT Department ***June 2025 – August 2025***
Maple Leaf Head Office, Lahore

- Built and integrated backend REST APIs using ASP.NET Web API, developing 10+ endpoints that powered core features of a production web application.
- Diagnosed and resolved ~15 reported bugs per week across live web and mobile applications, reducing the active backlog by approximately 30%.
- Worked across frontend, backend, and database layers to maintain and extend full-stack production tools — experience directly applicable to integrating AI models into real products.

Lab Teaching Assistant – Computer Organization & Assembly Language ***January 2025 – May 2025***
FAST NUCES, Lahore

- Mentor 40+ students per session in x86 assembly programming, covering register operations, memory addressing, and interrupt handling.
- Run hands-on debugging sessions to help students trace low-level program behavior and resolve conceptual gaps.

PROJECTS

Opportunity Inbox — Top 5, SOFTEC'26 AI Hackathon | *Python, FastAPI, LLMs, Prompt Engineering, RAG*

- Designed an LLM pipeline that parses raw emails and extracts structured opportunity data using prompt-engineered extraction and retrieval over relevant context.
- Built a deterministic, explainable scoring layer on top of LLM outputs — combining opportunity-cost analysis with evidence traces so every ranking is auditable — integrated into a production-style FastAPI backend, placing Top 5 out of competing teams.

AI-Powered Quiz Generator & Subject Classifier | *Python, PyTorch, Transformers, RAG, FastAPI, Streamlit*

- Fine-tuned a T5 Transformer model for automated quiz generation and integrated RAG to ground questions in source material, improving factual accuracy; built and evaluated subject-classification models achieving 98%+ accuracy across 17 subjects.
- Exposed the pipeline through a REST API and a Streamlit interface, taking it from fine-tuning through evaluation to a usable production-style tool.

Legal Assistant Application — Plain-English Legal RAG System | *Python, RAG, ChromaDB, Groq (Llama 3.3), Streamlit*

- Built an end-to-end RAG pipeline over Pakistani law (Penal Code, CrPC, Constitution), chunking source text by Section/Article and embedding it with sentence-transformers into a ChromaDB vector store for traceable, citation-backed retrieval.
- Designed a grounded generation layer (Groq Llama 3.3 70B) that answers only from retrieved text, cites the exact Section/Article, and explicitly refuses when no match is found; shipped as a deployed Streamlit chat app.

PakWedding Portal — Full-Stack Wedding Planning Platform | *React, TypeScript, FastAPI, MongoDB*

- Built a full-stack platform with role-based access control and scalable REST APIs following Clean Architecture, supporting multiple user roles end-to-end.

MoveOn — Smart Moving & Logistics App | *Kotlin, Jetpack Compose, Firebase, ML Kit*

- Built a mobile app integrating ML Kit object detection for QR-based inventory management, alongside real-time tracking and OTP-secured bookings.

TECHNICAL SKILLS

AI / ML: Python, PyTorch, Transformers, LLMs, RAG, NLP, Model Fine-Tuning
Backend / APIs: FastAPI, REST APIs, Streamlit
Data: Pandas, NumPy, MongoDB, SQL
Tools: Git, GitHub
Also Proficient In: React, Next.js, JavaScript/TypeScript, Node.js, C/C++
